

HARSHAVARDHAN GOWDA D B

Network Engineer | Enterprise Routing, Switching & SD-WAN | L2/L3 Operations
Bengaluru, Karnataka • harshavardhangowda9148@gmail.com • +91 9148926984

PROFESSIONAL SUMMARY

Results-driven Network Engineer with 3+ years of enterprise experience in SD-WAN operations, L2/L3 incident resolution, and global network support across 2,000+ sites. Strong working knowledge of Cisco routing & switching and routing protocols (BGP, OSPF, EIGRP), with hands-on experience diagnosing complex connectivity escalations, performing packet-level analysis (EagleEye), and driving strict SLA compliance in 24x7 NOC environments. Customer-facing communicator skilled in secure remote access (Zscaler, VPN) and network monitoring (SolarWinds, NetFlow), with hands-on Linux and cloud administration for reliable, highly available hybrid connectivity.

TECHNICAL SKILLS

Routing & Switching: Cisco Catalyst & Nexus, Cisco Meraki, BGP, OSPF, EIGRP, TCP/IP, LAN/WAN, DHCP, DNS, VLANs

SD-WAN & Connectivity: Aryaka SD-WAN, IPsec/SSL VPN, Cisco AnyConnect, Zscaler Private Access (ZPA)

Monitoring & Analysis: EagleEye packet analysis, SolarWinds, NetFlow, packet capture, traceroute, ARP table analysis (working knowledge of Wireshark)

Security & Access: Active Directory, LDAP, IAM, Multi-Factor Authentication (MFA), Citrix VDI

Cloud & Systems: AWS (IAM, EC2, EBS, AMI), Citrix Cloud, Linux (RHEL/CentOS), Windows Server 2022

ITSM & Ticketing: ServiceNow, Salesforce, JIRA

PROFESSIONAL EXPERIENCE

Network Engineer | Aryaka Networks

Sep 2024 – Present

- Led L2/L3 troubleshooting and SD-WAN optimization, including Link Management Module (LMM) migrations across 2,000+ remote sites, reducing edge-to-core latency and achieving zero unplanned customer downtime during cutovers.
- Managed core network architecture and Linux-based ANAP edge devices via MobaXterm, executing CLI configuration audits and preserving IPsec/SSL-VPN tunnel health to maintain 99.9% global network uptime.
- Performed packet-level analysis using EagleEye and Linux utilities (traceroute, ARP) to isolate packet loss, latency spikes, and circuit degradation, eliminating recurring infrastructure bottlenecks for enterprise clients.
- Collaborated with global ISPs and internal NOC teams to resolve last-mile access escalations, tracking the full incident lifecycle in Salesforce and JIRA to ensure strict SLA adherence.

Network & Systems Support Engineer | DXC Technology

Apr 2023 – Aug 2024

- Served as Tier-2 escalation point for global MetLife users across the US, Europe, and India; diagnosed Zscaler Private Access (ZPA), Cisco AnyConnect VPN, and Citrix VDI failures, reducing recurring connectivity ticket volume by ~20%.
- Administered Windows and Linux (RHEL/CentOS) server environments, using CLI utilities (ssh, systemctl, ping) to verify reachability, restart stalled authentication daemons, and govern LDAP user access.
- Conducted deep-dive authentication log forensics (grep, tail, journalctl) to isolate root causes of SSO handshake failures and accelerate first-contact incident triage.
- Supported global Identity & Access Management (IAM) workflows, executing cross-domain permissions, MFA rollouts, and secure endpoint administration for remote personnel.

EDUCATION

Bachelor of Engineering, Information Science

2018 – 2022

Bapuji Institute of Engineering and Technology
